rush search

Subject: Importance: High

Hi Paula,

Could you please authorize the following rush search for an amendment which is due?

Thanks, Jennifer

STIC:

Please search SEQ ID NO: 1 from 09/844,281 in pending and commercial databases.

Thanks, Jennifer Graser REMSEN EO3 B09/ 3C18 mailbox AU 1645 272-0858

Molecular characterization of the Bacillus anthracis main S-layer component: evidence that it is the major cell-associated antigen.";
Mol. Microbiol. 23:1147-1155(1997).
I- FUNCTION: The S-layer is a paracrystalline mono-layered assembly of proteins which coat the surface of bacteria.
SINGELULAR LOCATION: Cell wall.
I- SIMILARITY: Contains 3 S-layer homology (SLH) domains.
This produced through a collaboration of the surface of through a collaboration.

-!- FURCATION: The S-layer is a paracrystalline mono-layered assembly of proteins which coat the surface of bacteria.

-!- SUBCELIULAR LOCATION: Cell wall.

-!- SIMILARITY: Contains 3 S-layer homology (SLH) domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
-!- FUNCTION: The S-layer is a paracrystalline mono-layered assembly of proteins which cost the surface of bacteria.
- SUBCELLULAR LOCATION: Cell wall.
- PTM: PROBABLY GLYCOSYLATED.
- SIMILARITY: Contains 3 S-layer homology (SLH) domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Cell wall; S-layer; Complete proteome.

Submitted (NOV-1999) to the EMBL/GenBank/DDBJ databases.
-!- SUBCELLULAR LOCATION: Cell wall (Potential).
-!- SIMILARITY: IN THE C-TERMINAL SECTION; BELONGS TO THE NACTYLMURAMOYL-L-ALANINE AMIDASE FAMILY 3.
-!- SIMILARITY: Contains 3 S-layer homology (SLH) domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              28-FEB_2003 (Rel. 41, Created)

"Cloning and sequencing of the gene encoding a 125-kilodalton
"Cloning and sequencing of the gene encoding a 125-kilodalton
surface-layer protein from Bacillus sphaericus 2362 and of a related
curptic gene.";
J. Bacteriol. 171:4178-4188(1989).
-!- FUNCTION: The S-layer is a paracrystalline mono-layered assembly
of proteins which coat the surface of bacteria.
-!- SUBCELLULAR LOCATION: Cell wall.
-!- SIMILARITY: Contains 3 S-layer homology (SLH) domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        424 HGTETPYYKAPTQKSNPYVNDSRILAEKIQ-KRLITALQTRDRGVKIGNLYVLREN

J. Bacteriol. 176:1224-1233(1994).

J. Bacteriol. 176:1224-1233(1994).

J. PUNCTION: The S-layer is a paracrystalline mono-layered assembly of proteins which coat the surface of bacteria.

J. SUBCELLIDIAR LOCATION: Cell wall. This bacterium is covered by a Slayer with hexagonal symmetry.

J. PTM: THE CARBOHYDRATE CONTENT OF THIS PROTEIN IS ABOUT 8% WHICH CORRESPOND TO ABOUT 40 TO 50 SUGAR MOLECTIES PER MONOMER. O-LINKE GLYCANS CONSIST OF GL., GALINAC AND GLCNAC.

Protein synthesized by Bacillus subtilis harboring the surface layer protein synthesized by Bacillus subtilis harboring the surface layer protein error from Bacillus brevis 47.";

-: FUNCTION: The middle wall protein binds to peptidoglycan and to the outer cell wall protein.

-: SUBJUNIT: THE MIDDIA CELL WALL LAYER IS CONFOSED OF SUBJUNITS OF THE MIDDIA CELL WALL THESE PROTEINS FORM A HEXAGONAL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ė
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Yamagata H.,

O157:H7 and genomic comparison with a laboratory strain K-12.";

DNA Res. 8:11-22(2001)

- I- SIMILARITY: Contains 16 Big-I domains.

- I- SIMILARITY: Belongs to the intimin/invasin family.

- I- SIMILARITY: Ref.2 sequence differs from that shown due to a frameshift in position 1315.

Database

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
